## Claims

**WO** 2005/085136

1. A method for removing sodium oxalate from a Bayer liquor, the method comprising removing a stream of the liquor, treating it to be supersaturated with sodium oxalate, and then subjecting it to ultrasonic irradiation, and removing resultant crystals.

PCT/GB2005/000812

- 2. A method as claimed in claim 1 wherein the stream of the supersaturated liquor is subjected to ultrasonic irradiation for a time no more than 30 seconds, more preferably no more than 10 seconds, for example 2 seconds or 3 seconds.
- 15 3. A method as claimed in claim 2 wherein the stream is caused to flow through a duct, and the contents of the duct are continuously subjected to ultrasonic irradiation.
- 4. A method as claimed in claim 3 wherein the ultrasound is applied using a multiplicity of ultrasonic transducers attached to a wall of the duct in an array of separate transducers extending both circumferentially and longitudinally, each transducer being connected to a
- signal generator so that the transducer radiates no more than 3  $\rm W/cm^2$ , the transducers being sufficiently close together and the number of transducers being sufficiently high that the power dissipation within the vessel is between 25 and 150  $\rm W/litre$ .

30

- 5. A method as claimed in claim 4 wherein the duct is of width at least  $0.10\ m.$
- 6. A method as claimed in any one of the preceding claims wherein the Bayer liquor is first treated by

evaporation so that it becomes supersaturated with sodium oxalate.

- 12 -

PCT/GB2005/000812

- 7. A method as claimed in any one of the preceding
  5 claims wherein the crystals resulting from ultrasonic irradiation are contacted with liquor that is supersaturated with sodium oxalate so the crystals grow, before removing resultant crystals.
- 10 8. A method as claimed in any one of the preceding claims wherein a stream of liquid that is supersaturated in sodium oxalate and which contains crystals of sodium oxalate is subjected to ultrasonic irradiation, to cause more crystal growth.

15

35

**WO** 2005/085136

- 9. An apparatus for removing sodium oxalate from a Bayer liquor, the apparatus comprising means to make a stream of the liquor supersaturated with sodium oxalate, means to subject supersaturated liquor to ultrasonic
- 20 irradiation, and means to remove the resultant crystals.
- 10. An apparatus as claimed in claim 9 wherein the ultrasonic irradiation means comprises a duct with a multiplicity of ultrasonic transducers attached to a wall of the duct in an array of separate transducers extending both circumferentially and longitudinally, each transducer being connected to a signal generator arranged such that the transducer radiates no more than 3 W/cm², the number and the proximity of the transducers being sufficient that the power dissipation within the vessel in use is between 25 and 150 W/litre.
  - 11. An apparatus as claimed in claim 9 or claim 10 also comprising a vessel in which supersaturated liquor is combined with the liquor that has been subjected to

WO 2005/085136 PCT/GB2005/000812

- 13 -

ultrasonic irradiation, before removal of any resultant crystals.

12. An apparatus as claimed in claim 9, claim 10 or claim 11 also comprising means to subject a stream of liquid that is supersaturated in sodium oxalate and which contains crystals of sodium oxalate to ultrasonic irradiation, to cause more crystal growth.

10
